Individual tasks

1|

Provide the room with the lowest number in its room category.

2|

List the number of paid reservations for each guest. Do not list guests who have made fewer than 3 reservations.

3|

Find the category with the most rooms.

4|

List without repetition the guests who booked rooms in both category 3 and category 1.

5|

List the duration of all reservations. Provide the customer's first and last name, and name the column with the time “Reservation time.”

6|

List the number of unpaid reservations for each guest. Do not list guests whose names begin with the letter “B.”

7|

Find rooms that have never been booked.

8|

List guests who have never rented any room (name, surname).

9|

List the booking data in the form: first name, last name, room number, category name. Sort by category name and descending by last name.

10|

List luxury rooms that have more beds than the minimum number of beds in a standard room.
